Submitting to the STS Registries with CAOS

Need Help? Simply click on the desired field then click the “?” for an STS defined data dictionary.

STS Audit buttons offer quality control options as data is being collected.

CAOS and the STS

CAOS has been providing STS certified software since 1998 and supports ALL current STS Databases—Adult Cardiac 2.61, General Thoracic Surgery 2.81 and Congenital Heart 2.50. The CAOS software provides functionality beyond STS submission with automated reports, electronic signatures, electronic faxing and a robust research environment. CAOS provides you functionality well beyond the requirements of the STS.

Certified for all current versions of STS Adult Cardiac, Thoracic Surgery and Congenital Heart

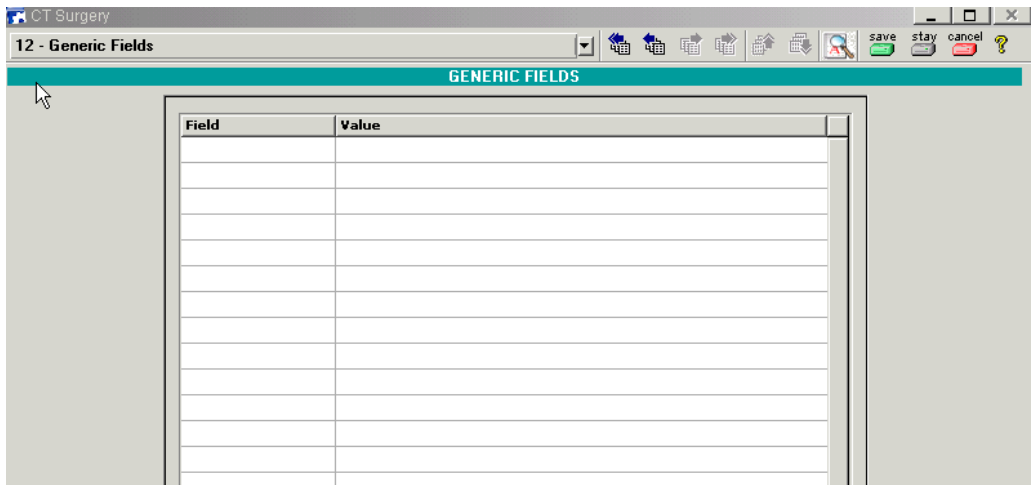

Internet based delivery is cost effective and minimizes setup time

Unlimited number of generic fields

5 Minutes to collect data from start to finish

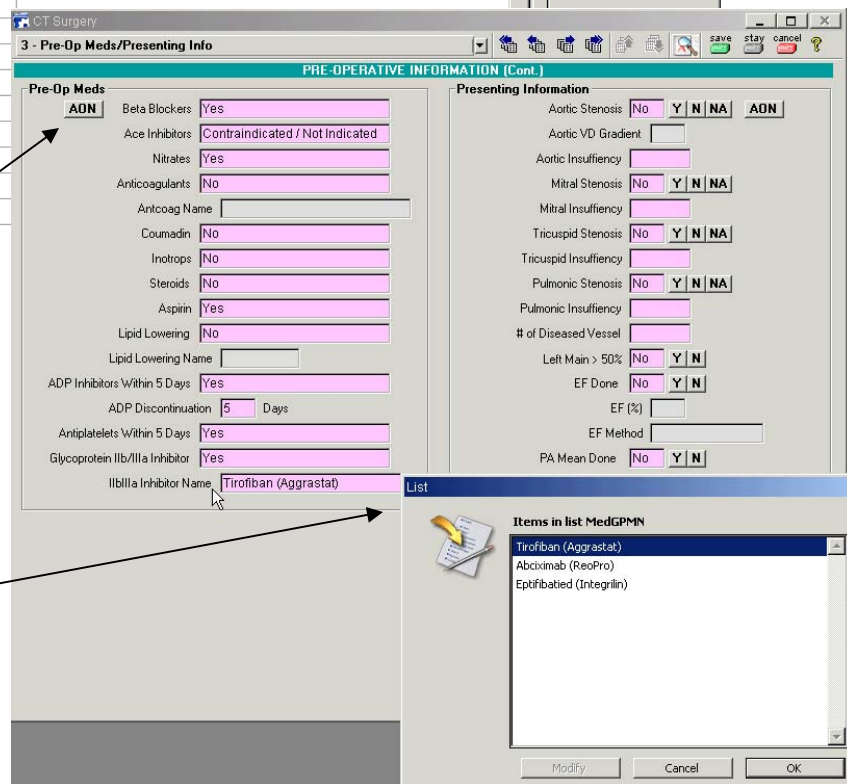

FREE import of data from STS shareware into CAOS

Help Buttons & Drop down menus for easy data entry

Need additional data fields? An unlimited number of generic fields may be added. These additional fields can be re-researched and reported on just like the standard CAOS fields.

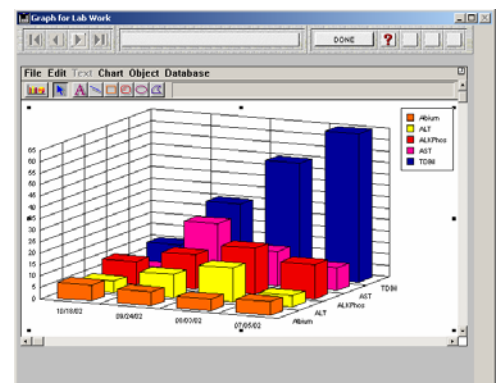

AON– The All Others
No button minimizes the total number of clicks as the end user only enters the fields that are yes.

Need for speed? Every field in CAOS, where applicable, utilizes drop down menus and pick lists. Every effort has been made to minimize data input time.

The CAOS research environment

- All data is easily cross referenced
- Data is easily exportable to other research formats
- Unlimited Custom reports
- STS submission easy as a button click

The CAOS STS Database Advantage

- **Communication is everything**– Even amongst computers and software, communication is key to a solid relationship. CAOS supports interfaces with all major billing, lab, scheduling, Hemodynamic and hospital ADT systems. Some of the vendors CAOS has integrated with include: Witt, Datagate, Cerner, Midas, MediTech, SMS, Quadromed, GE, Siemens and McKesson.
- **Reporting**– Submitting data to the STS is as easy as a click of a button with CAOS but more importantly your vital patient information is available for internal outcomes reports and queries. Every field in the CAOS database can be compared, contrasted and queried against every other field. Your hospital can research trends and data for a better understanding of patient care.
- **The CAOS Specialty is also your Specialty**– CAOS inc. began in the field of Cardiothoracic Surgery informatics in 1991. We have grown and expanded into supplementary care such as Thoracic and Vascular Surgery. Cardiothoracic & Thoracic Surgery departments are dynamic and complex entities. This ever changing environment demands an informatics system that is uniquely qualified to capture data specific to Cardiac and Thoracic Surgery. Maintaining STS certifications, Interfacing with Hospital Enterprise and Practice management systems, understanding surgical work flow and terminologies are a full time effort. These are areas where our expertise clearly rises above our competitors.
- **Growth is Important**–CAOS was designed to provide a mechanism for our clients to submit data to the STS, however this functionality is only the tip of the iceberg. CAOS is a powerful tool capable of electronically running an entire Heart Center. Automated reports, HIPAA compliance, electronic signatures, electronic patient charts, outcomes reporting, elimination of transcription and paper charts are all advantages of the CAOS solution.
- **Teamwork**– It takes ongoing support and guidance for any software solution to be successful. The CAOS staff and our clients work on the same team towards common goals. We help our clients to be successful by providing continued training, Internet classes, quarterly newsletters, one on one technical support, (no automated telephone voice responses) and a staff that truly cares about the success of your software solution 24 hours a day, 7 days a week, 365 days a year.
